

SHORT NEWS

17-01-2017

ALPINE'S ROAD CAR WILL FEATURE A BESPOKE ALL-ALUMINIUM PLATFORM AND UPPER BODY THAT ENSURE LIGHTWEIGHT AND AGILE HANDLING.

The new Alpine's frame is a fundamental feature of the car's design since it houses its engine, transmission and suspension.

The use of aluminium for this bespoke platform ensures light weight.

Only a small number of carmakers use aluminium for the bodywork of their models. Sculpting assembling and welding aluminium calls for a unique expertise. The reward is a significant weight saving and a high-quality finish.
